1. AUTHOR: GORSKAYA, K. S. 2. TITLE: Participation of different phosphate acceptors in the phosphorylation coupled with respiration. K. S. Gorskaya. Doklady Akad. Nauk SSSR, No. 4/5, 379-80 (1941) (English summary).—In muscle tissue (minced red muscle, cardiac muscle) hexose monophosphate can participate in respiratory phosphorylation. It acts as an acceptor of phosphate groups. Under the existing capill. conditions the phosphorylation of hexose monophosphate results in the accumulation of hexose diphosphate and phosphotriose. Glucose is a relatively weak phosphate acceptor in muscle tissue. Under aerobic conditions glucose is intensely phosphorylated only in presence of hexokinase. Glycogen apparently can act as phosphate acceptor in respiratory phosphorylation, only because of its transformation into hexose monophosphate owing to phosphorylase. Phosphate acceptors can be arranged as follows: hexose monophosphate > glucose + hexokinase > creatine > glucose. M. Hirsch.

**AUTHORS:** Gołos, Stefan, Master of Engineering, and Krajewski, Bohdan, Doctor of Engineering

**TITLE:** Determination of the velocity field in the clearance between blade rows, with the influence of the shape of the duct

**SOURCE:** Warsaw. Instytut Lotnictwa. Prace. no. 13, 1961, 3-17

**DESCR:** The authors consider a steady-state axially-symmetric flow of non-viscous compressible fluid. The effect of curvature and inclination of the duct on the velocity field is taken into account. Initial equations are derived from Vazsonyi's relations using curvilinear coordinates, and are found to satisfy Euler's and Legendre's conditions for the existence of a double variational integral. Boundary conditions are given and the differential equation reduced to a variational problem is solved on the assumption that total enthalpy, entropy and circulation are linearly dependent on

the stream function  $\psi$ . The stream function is found in two steps, the first step assuming a one-dimensional flow, and dimensional quantities are used to facilitate the computation. Galerkin's method is used to obtain the solution in its final form, i.e. two linear equations with two unknowns. An appendix containing a complete mathematical solution of the problem is given, and a numerical example is solved to illustrate the method. There are 4 figures and 9 tables.

TITLE: Measurement of static pressure in a three-dimensional flow

SOURCE: Teploenergetika, no. 12, 1966, 60-62

TOPIC TAGS: static pressure, supersonic flow, pressure measurement

ABSTRACT: The paper analyzes the results of measurement of static pressure by means of a tube with an ogival spout. It is shown that in a supersonic three-dimensional flow, the local values of dimensionless velocities measured with a tube are not reliable. The tube used for measuring static pressures should be calibrated in a non-uniform supersonic flow generated by planar airfoils in cascade. The calibration should be carried out by comparing mean readings of the tube to mean readings of drain samplers taken as the standard. The calibration dependence obtained on planar airfoils in cascade is universal in character. Orig. art. has: 6 figures, 1 table and 2 formulas.

Title : Rivalry for the privilege to participate in the All-Union Agricultural Exhibit

Periodical : Veterinariya, 6, 3-7, June 1954

Abstract : The Council of Ministers of the USSR has issued a decree granting USSR biochemical factories the privilege of participating in the permanent All-Union Agricultural Exhibit which will soon be opened to the public. This exhibit idea originated in the September plenum of the Central Committee of the CPSU. The purpose of the exhibit is to demonstrate the most advanced methods used by kolkhozes, sovkhozes, veterinary district machine-tractor stations, and rayon veterinary hospitals. Only those scientific-research institutes and experimental stations will be eligible to participate which have displayed a high level of initiative in developing techniques of great theoretical and practical value.

Periodical : Vop. pit., 60-61, Jan/Feb 1955

Abstract : Handbook is published in two volumes. First volume treats such matters as organization, meat inspection, sanitation, and transport. The second volume deals with the caring of sick animals, disinfection, and the official inspection standards for meat production. A short-coming of the handbook is the lack of an alphabetical subject index. Published by Sel'khozgiz, 1954.

Abstract: At the test site of the Stavropol' Agricultural Institute  
the boost in the potato harvest through the application  
of NPK in side dressing during various periods did not  
exceed 10%; the yield was somewhat increased by the  
supplemental feeding of N during budding.
